

## **It's time to check your oil tank**

It's the time of year again when many households in Lincolnshire will be getting their domestic oil deliveries for the winter.

The Environment Agency is urging homeowners to check their oil tanks now as domestic heating oil can cause major problems if it leaks into the environment. It can pollute rivers, harm wildlife and contaminate the ground. It's not just the cost of losing the oil that can be expensive, clean up costs can be large and are not always covered by household insurance policies.

If you own a domestic oil tank, you should follow the Environment Agency's advice:

- Regularly look for corrosion damage and signs of leaks on the tank and pipe work. If you notice a problem, get it fixed straight away.
- Place your oil tank as far away from drains, streams and ponds as possible.
- Secondary containment (such as a bund) will prevent oil from escaping into the environment in the event of a leak developing. This is a legal requirement for domestic tanks which store in excess of 3,500 litres.
- Arrange for your boiler and tank to be serviced at least once a year by an Oil Firing Technical Association (OFTEC) technician.
- Monitor your oil usage levels. If your oil usage suddenly changes, this could indicate a leak.
- Supervise your oil deliveries. Don't allow your tank to be overfilled and do not purchase more oil than you can safely store.
- Check your home insurance covers clean up costs on both your own property and neighbouring land or boreholes.

Further information can be obtained by visiting the Environment Agency's website at [www.environment-agency.gov.uk/osr](http://www.environment-agency.gov.uk/osr)

If you would like to report an oil spill or leak, please contact the Environment Agency's emergency hotline on 0800 807060.
